

AfterLogic WebMail Pro

Webmail front-end for your existing POP3/IMAP mail server. Meet demands of your existing users with the fast and modern-looking AJAX webmail.

Address Book

Calendar

Easy

WebMail Pro is easy to install, easy to use, easy to manage. Offer your users what they like – a clean and intuitive webmail interface. The integrated web administration panel allows you to easily manage your users and system settings.

Fast

Your users will enjoy WebMail Pro performance even on slower computers. The light-weight interface is lightning fast, thanks to the well-designed system architecture utilizing extensive caching and vast optimizations of rendering the user interface.

Smart

WebMail Pro look-and-feel is designed to give users what they may need at the moment and avoid clutter of complex menus, toolboxes and unwanted features. These efforts result in improved usability and light-weight interface layout. E-mail address auto-complete, drag-n-drop, message preview pane and other features will save time and let your users be even more productive.

Compatible

WebMail Pro fully supports Internet Explorer, Firefox, Safari, Chrome, Opera and is available for both major web platforms: ASP.NET and PHP. You can deploy it on a dedicated server or shared hosting account.

WebMail Pro can be used to access mail on virtually any POP3/IMAP-enabled mail servers. If you do not have a mail server yet, take a look at AfterLogic XMail Server Pro which is the native mail server solution for WebMail Pro.

Capable

Still not overloading the user interface with tons of controls, WebMail Pro can provide a lot of value for you and your users:

- Private and shared calendar
- Local and remote mail accounts
- Folders and sub-folders
- Many skins and interface languages
- Rich-text (WYSIWYG) editor
- Modern AJAX user interface
- Web-based administration panel

Customers Say:

"The result has been a huge success and wish to commend your team on such a great product. Well done on a fantastic product!"

Darren Saunders

"Your service on a free product is outstanding! I only wish that my server company had a response rate like yours. Congratulations on a wonderful product."

Wayne Holmes
