

SSIS Components

Connect SQL Server to live data from applications, databases, and Web APIs!

A set of SSIS Data Flow Tasks which enable SQL Server to connect to data from Dynamics, NetSuite, Salesforce, SharePoint, MongoDB, MySQL, etc.

Powerful SSIS source & destination components that allow users to easily connect SQL Server with live data from applications, databases, and Web APIs through standard SSIS workflows. Use our SSIS components for data synchronization, back-office integration, workflow automation, and more!

- Full Create, Read, Update, and Delete (CRUD) support.
- Perfect for data synchronization, ETL, local back-ups, automation, and more!
- Automate integration processes like mass imports / updates, data cleansing, and de-duplication.
- Off-load queries from operational systems to reduce load and increase performance.
- Connect data to analytics for BI and decision support.
- Archive data for disaster recovery.

SSIS Component Features:

- **SQL Integration Services (SSIS):** Support for Microsoft SQL Server Integration Services (SSIS) (2005, 2008, 2012, & 2014).
- **Straightforward Data Workflow:** Fully-integrated with SQL SSIS Visual Studio .NET environment and Microsoft Business Intelligence Development Studio at design-time.
- **Easily Customizable and Configurable:** Add or remove tables/columns, change data types, etc. without requiring a new build.
- **Replication and Caching:** Copy data to local and cloud data stores such as Oracle, SQL Server, Google Cloud SQL, etc. The replication commands include many features that allow for intelligent incremental updates to cached data.
- **String, Date, Numeric SQL Functions:** Our drivers include a library of 50 plus functions that can manipulate column and output formatting. Popular examples include Regex, JSON, and XML processing functions.
- **Collaborative Query Processing:** Our drivers enhance the capabilities of the data sources which they connect to by offering additional client-side processing, when needed, to enable analytic summaries of data such as SUM, AVG, MAX, MIN, etc.
- **Fully Managed .NET:** 100% fully-managed .NET libraries supporting .NET Framework 2.0 and beyond.
- **Secure Connectivity:** Enterprise-class security (TLS/SSL) encryption for all client-server communications.
