Remote Desktop Manager

Choosing your data source

Will you be using Remote Desktop Manager in a team environment?

✓ (left branch)

Do you need to implement user permissions and/or log activities?

✓

Do you require Active Directory integration where group membership drives the security system?

✓

✗

Do you have any special requirements that results in the need to host the data in your own infastructure?

✓

Local

✗

Cloud

✗

There is **NO protection** against file contention issues. Only one single user should have writing rights.

✗ (right branch)

Do you need to share the data between multiple computers?

✓

Cloud

Except for **Devolutions Online Drive**, there is **NO protection** against file contention issues. It is highly recommanded to close the application when leaving your workstation.

✗

Local

Local Data Source (SQLite, XML) .
