

FathFTP component

By Fath Software

License agreement

This Limited Use Software License Agreement (the "Agreement") is a legal agreement between you, the end-user ("Licensee"), and author. By using this software or storing this program ("FathFTP component") on a computer hard drive or other media, you are agreeing to be bound by the terms of this Agreement.

You may install trial version of this program to test and evaluate for 30 days; after that time you must either register this program or delete it from your computer hard drive.

The trial version of software may be distributed freely on online services, bulletin boards, or other electronic media as long as the files are distributed in their entirety.

You may not alter this software in any way, including changing or removing any messages or windows.

You may not decompile, reverse engineer, disassemble or otherwise reduce this software to a human perceivable form. You may not modify, rent or resell for profit this software. You may not publicize or distribute any registration code algorithms, information, or registration codes used by this software without permission of author.

Author grants a license to use the enclosed software to the original purchaser.

Customer written applications containing embedded FathFTP component may be freely distributed, without royalty payments to author, provided that such distributed product is bound into these applications in such a way so as to prohibit separate use in design mode, and that such product is distributed only in conjunction with the customer's own software product.

This control may be used as a constituent control only if the compound control thus created is distributed with and as an integral part of an application. This license may be transferred to a third party only if all existing copies of the software and its documentation are also transferred.

This product is licensed for use by only one developer at a time. Author expressly prohibits installing this product on more than one computer if there is any chance that both copies will be used simultaneously. This restriction also extends to installation on a network server, if more than one workstation will be accessing the product. All developers working on a project which includes an FathFTP component product, even though not working directly with the product, are required to purchase a license for that product.

This software is provided "as is". Author makes no warranty, expressed or implied, with regard to the software. All implied warranties, including the warranties of merchantability and fitness for a particular use, are hereby excluded.

AUTHOR'S LIABILITY IS LIMITED TO THE PURCHASE PRICE. Under no circumstances shall author of this product be liable for any incidental or consequential damages, nor for any damages in excess of the original purchase price.

Plain English version:

We require that you purchase one copy of a control per developer on a project. If this is met, you may distribute the control with your application royalty free. You may never distribute the LIC file. You may not change the product in any way that removes or changes the requirement of a license file.

We encourage the use of our controls as constituent controls when the compound controls you create are an integral part of your application. But we don't allow distribution of our controls as constituents of other controls when the compound control is not part of an application. The reason we need to have this restriction is that without it someone might decide to use our control as a constituent, add some trivial (or even non-trivial) enhancements and then sell the compound control. Obviously there would be little difference between that and just plain reselling our control.

If you have purchased the source code, you may not re-distribute the source code either (nor may you copy it into your own project). Author retains the copyright to the source code.

Your license is transferable. The original purchaser of the product must make the transfer request. Contact us for further information.

The sample versions of our products are intended for evaluation purposes only. You may not use the sample version to develop completed applications.

Technical support

Internet Mail

You can send E-mail to technical support via the Internet. Messages should be addressed to support@fathsoft.com .

World Wide Web

The Fath Software web site is located at <http://www.fathsoft.com> . You can access our web site for up-to-date information about the product, support forum, knowledgebase and news.

FFTP_SERVER_PERMISSIONS

FFTP_STATES

<u>BinaryMode</u>	BinaryMode transfer indicator
<u>Busy</u>	Indicates if last command is completed
<u>CurrentWorkingDirectory</u>	Returns/sets current working dir. at FTP server
<u>IsConnected</u>	Returns TRUE if connection is established
<u>LastServerResponse</u>	Returns last server response as number
<u>LastServerResponseText</u>	Returns last server response as text
<u>MaxBandwidth</u>	Maximum bytes-per-second allowed
<u>PassiveMode</u>	FTP passive mode indicator
<u>Password</u>	Password at FTP server
<u>ProgressID</u>	property ProgressID
<u>ProxyName</u>	SOCKS4 proxy server name
<u>ProxyPort</u>	SOCKS4 proxy server port
<u>ProxyUserID</u>	SOCKS4 proxy server UserID
<u>ServerName</u>	FTP server name (address)
<u>ServerPort</u>	FTP server port
<u>Timeout</u>	Timeout value in seconds
<u>Username</u>	Username at FTP server
<u>Version</u>	Returns component version string
<u>Abort</u>	Aborts data connection
<u>AboutBox</u>	shows AboutBox dialog
<u>BeginGet</u>	Starts async download
<u>BeginPut</u>	Start async upload
<u>Connect</u>	Establish the connection to FTP server
<u>CreateProgressID</u>	method CreateProgressID
<u>DeleteFile</u>	Deletes a file at FTP server
<u>Disconnect</u>	Closes the connection
<u>EnumFiles</u>	Retrieves file listing
<u>FileExists</u>	Check file existence
<u>FreeProgressInfo</u>	method FreeProgressInfo
<u>Get</u>	Retrieves a file from FTP server
<u>GetFromURL</u>	Retrieves a file from URL address
<u>GetProgressInfo</u>	method GetProgressInfo
<u>HTTPUpload</u>	Upload files to HTTP server
<u>MGet</u>	Multiple fiels download

<u>MPut</u>	Mulitple files upload
<u>Put</u>	Sends a file to FTP server
<u>Quote</u>	Sends a command to FTP server
<u>RasConnect</u>	Establish dial-up internet connection
<u>RasDisconnect</u>	Hang-up internet connection
<u>RasIsConnected</u>	Returns RAS (dial-up) connection state
<u>RenameFile</u>	Renames a file at FTP server
<u>ServerAddUser</u>	Add FTP server user
<u>StartServer</u>	Start FTP server
<u>StopServer</u>	Stop FTP server
<u>ClientConnected</u>	ClientConnected event is raised when client is connected to FathFTP build-in FTP server
<u>ClientDisconnected</u>	ClientDisconnected event is raised when client is disconnected from FathFTP build-in FTP server
<u>EnumFile</u>	Returns a file listing data
<u>Reply</u>	Returns FTP server reply text
<u>StateChange</u>	Indicates the state change of the FTP connection
<u>TransferComplete</u>	Indicates that transfer is completed
<u>TransferProgress</u>	Reports transfer progress
<u>TransferStarting</u>	Indicates that transfer is about to start

Properties

BinaryMode

Property BinaryMode As Long

BinaryMode transfer indicator

Set this property to True if you want to transfer files exactly as they are on server. Use this for graphics or program files.

If this property is False. End-of-line marks in text files are translated between host and server. Default value is True.

Busy

Property Busy As Long

Indicates if last command is completed

CurrentWorkingDirectory

Property CurrentWorkingDirectory As String

Returns/sets current working dir. at FTP server

IsConnected

Property IsConnected As Long

Returns TRUE if connection is established

LastServerResponse

Property LastServerResponse As Long

Returns last server response as number

Here is a list of FTP response codes:

- 000 Announcing FTP.
- 010 Message from system operator.
- 020 Exected delay.
- 030 Server availability information.
- 050 FTP commentary or user information.
- 100 System status reply.
- 110 System busy doing...
- 150 File status reply.
- 151 Directory listing reply.
- 200 Last command received correctly.
- 201 An ABORT has terminated activity, as requested.
- 202 Abort request ignored, no activity in progress.
- 230 User is "logged in". May proceed.

- 231 User is "logged out". Service terminated.
- 232 Logout command noted, will complete when transfer done.
- 233 User is "logged out". Parameters reinitialized.
- 250 FTP file transfer started correctly.
- 251 FTP Restart-marker reply.
- 252 FTP transfer completed correctly.
- 253 Rename completed.
- 254 Delete completed.
- 257 Closing the data connection, transfer completed.

300 Connection greeting message, awaiting input.
301 Current command incomplete (no for long time).

330 Enter password.
331 Enter account (if account required as part of login sequence).
332 Login first, please.
400 This service not implemented.
401 This service not accepting users now, goodbye.
402 Command not implemented for requested value or action.
430 Log-on time or tries exceeded, goodbye.
431 Log-on unsuccessful. User and/or password invalid.
432 User not valid for this service.
433 Cannot transfer files without valid account. Enter account and
resend command.
434 Log-out forced by operator action. Phone site.
435 Log-out forced by system problem.
436 Service shutting down, goodbye.
450 FTP: File not found.
451 FTP: File access denied to you.
452 FTP: File transfer incomplete, data connection closed.
453 FTP: File transfer incomplete, insufficient storage space.
454 FTP: Cannot connect to your data socket.
455 FTP: File system error not covered by other reply codes.

456 FTP: Name duplication; rename failed.
457 FTP: Transfer parameters in error.
500 Last command line completely unrecognized.
501 Syntax of last command is incorrect.
502 Last command incomplete, parameters missing.
503 Last command invalid (ignored), illegal parameter combination.
504 Last command invalid, action not possible at this time.
505 Last command conflicts illegally with previous command(s).
506 Last command not implemented by the server.

507 Catchall error reply.
550 Bad pathname specification (e.g., syntax error).

LastServerResponseText

Property LastServerResponseText As String

Returns last server response as text

See LastServerReponse property.

MaxBandwidth

Property MaxBandwidth As Long

Maximum bytes-per-second allowed

PassiveMode

Property PassiveMode As Long

FTP passive mode indicator

Set this property to True if you want FathFTP control to use passive mode FTP data connection. That means, the client is connecting to FTP server to retrieve or post data. If PassiveMode is False, client wait until server connects to send or retrieve the data. Default value is False.

Password

Property Password As String

Password at FTP server

This is your password at FTP server you want to connect to.

ProgressID

Property ProgressID As String

property ProgressID

ProxyName

Property ProxyName As String

SOCKS4 proxy server name

The network address of the SOCKS4 proxy server (firewall) to work through: a machine name such as “mail.yourisp.com”, or a dotted number such as “128.56.22.8”.
Leave this property empty if you don’t want to use proxy.

ProxyPort

Property ProxyPort As Long

SOCKS4 proxy server port

This is the port number on SOCKS4 proxy server (firewall) to connect. The default value is 1080 which is the default SOCK4 proxy port number.

ProxyUserID

Property ProxyUserID As String

SOCKS4 proxy server UserID

Set this property if you want to send UserID data to the SOCKS4 proxy server.

ServerName

Property ServerName As String

FTP server name (address)

The network address of the server to connect to: a machine name such as “mail.yourisp.com”, or a dotted number such as “128.56.22.8”.

ServerPort

Property ServerPort As Long

FTP server port

This is the port number on FTP server to connect. The default value is 21 which is the default FTP port number.

Timeout

Property Timeout As Long

Timeout value in seconds

FathFTP methods will return "Timeout" error if timeout occurs in communication.

Username

Property Username As String

Username at FTP server

Set this to 'anonymous' for anonymous FTP access.

Version

Property Version As String

Returns component version string

Methods

Abort

Sub Abort

Aborts data connection

Use this method to cancel file transfer at any time.

AboutBox

Sub AboutBox

shows AboutBox dialog

BeginGet

Function BeginGet (RemoteFile As String, LocalFile As String, Offset As Long) As Long

Starts async download

BeginPut

Sub BeginPut (LocalFilename As String, RemoteFilename As String, Offset As Long)

Start async upload

Connect

Sub Connect

Establish the connection to FTP server

Establishes a connection to FTP server and authenticates the user with Username and Password properties.

If the method fails an error is raised.

CreateProgressID

Function CreateProgressID As String

method CreateProgressID

DeleteFile

Sub DeleteFile (Filename As String)

Deletes a file at FTP server

If the method fails an error is raised.

Disconnect

Sub Disconnect

Closes the connection

If the method fails an error is raised.

EnumFiles

Sub EnumFiles (FileMask As String)

Retrieves file listing

Set Filemask argument to an empty string "". If you want to get current directory listing. File data is returned through EnumFile event.

FileExists

Function FileExists (Filename As String) As Long

Check file existence

This method returns number of files that mach specified file mask. Or, zero if no files are found.

```
If ftp.FileExist("folder/image.jpg") Then  
ftp.DeleteFile "folder/image.jpg"  
End If
```

-- or --

```
NumTxtFiles = ftp.FileExist("*.txt")
```

FreeProgressInfo

Sub FreeProgressInfo

method FreeProgressInfo

Get

Sub Get (RemoteFile As String, LocalFile As String, Offset As Long)

Retrieves a file from FTP server

RemoteFile is a filename at FTP server.

LocalFile is a filename at your computer.

Offset parameter is 0 in most cases, you can use it to restart broken transfer from some point.

While transfer is in progress, an TransferProgress event is raised.

GetFromURL

Sub GetFromURL (URL As String, LocalFile As String, Username As String, Password As String, Resume As Long)

Retrieves a file from URL address

GetProgressInfo

Function GetProgressInfo (Bytes As Long) As Long

method GetProgressInfo

HTTPUpload

Function HTTPUpload (WebServer As String, WebPage As String, Fields As String, Files As String) As Long

Upload files to HTTP server

Arguments:

WebServer = web server address

WebPage = name of upload web page

Fields = list of 'fieldname' and 'fieldvalue' values delimited with '|'

Files = list of 'fieldname' and 'file path' values delimited with '|'

Returns TRUE if successful, or FALSE otherwise.

```
FathFTP1.HTTPUpload "www.mysite.com" , "upload.asp",  
"field1|value1|field2|value2" ,  
"file1|c:\folder\mypic.jpg|file2|c:\folder\myvideo.avi"
```

MGet

Sub MGet (RemoteFiles As String, LocalFolder As String)

Multiple files download

```
FathFTP.CurrentWorkingDirectory = "/public"  
FathFTP.MGet "*.txt"
```

MPut

Sub MPut (LocalPath As String)

Multiple files upload

```
FathFTP.CurrentWorkingDirectory = "/public"  
FathFTP.MPut "c:/texts/*.txt"
```

Put

Sub Put (LocalFilename As String, RemoteFilename As String, Offset As Long)

Sends a file to FTP server

RemoteFile is a filename at FTP server.

LocalFile is a filename at your computer.

Offset parameter is 0 in most cases, you can use it to restart broken transfer from some point.

While transfer is in progress, an TransferProgress event is raised.

Quote

Sub Quote (cmd As String)

Sends a command to FTP server

Sends an arbitrary command directly to FTP server.

Wait Reply event or read LastServerResponse property to see how FTP server processed the command.

This method can be used to create or delete FTP server folders.

To create a folder, use:

```
FathFTP.Quote "MKD foldername"
```

or, to delete a folder, use:

```
FathFTP.Quote "RMD foldername"
```

RasConnect

Sub RasConnect (ConnectionName As String, Username As String, Password As String, RedialNo As Long)

Establish dial-up internet connection

RasDisconnect

Sub RasDisconnect

Hang-up internet connection

RasIsConnected

Function RasIsConnected (ConnectionName As String) As Long

Returns RAS (dial-up) connection state

RenameFile

Sub RenameFile (OldFilename As String, NewFilename As String)

Renames a file at FTP server

If the method fails an error is raised.

ServerAddUser

Sub ServerAddUser (Username As String, Password As String, RootFolder As String, Permissions As FFTP_SERVER_PERMISSIONS)

Add FTP server user

This method should be called before StartServer to add users to FTP server.

To allow anonymous access, call this method with Username parameter set to "Anonymous".

See [FFTP_SERVER_PERMISSIONS](#).

```
serv.ServerAddUser "anonymous", "", "c:/dxmedia", FFPERM_LIST + FFPERM_READ
serv.ServerAddUser "root", "hardtoguess", "c:/dxmedia", FFPERM_ALL
serv.StartServer 9999
```

```
ftp.ServerName = "localhost"
ftp.ServerPort = 9999
ftp.Username = "anonymous"
ftp.PassiveMode = True
ftp.Connect
```

```
ftp.EnumFiles ("")
```

ftp.Disconnect

StartServer

Sub StartServer (PortNumber As Long)

Start FTP server

```
serv.ServerAddUser "anonymous", "", "c:/dxmedia", FFPERM_LIST + FFPERM_READ  
serv.ServerAddUser "root", "hardtoguess", "c:/dxmedia", FFPERM_ALL  
serv.StartServer 9999
```

```
ftp.ServerName = "localhost"  
ftp.ServerPort = 9999  
ftp.Username = "anonymous"  
ftp.PassiveMode = True  
ftp.Connect
```

```
ftp.EnumFiles ("")
```

```
ftp.Disconnect
```

StopServer

Sub StopServer

Stop FTP server

Events

ClientConnected

Sub ClientConnected (User As String, Address As String)

ClientConnected event is raised when client is connected to FathFTP build-in FTP server

ClientDisconnected

Sub ClientDisconnected (User As String, Address As String)

ClientDisconnected event is raised when client is disconnected from FathFTP build-in FTP server

EnumFile

Sub EnumFile (Filename As String, FileSize As Double, User As String, Group As String, FileDate As Date, FileFlags As String)

Returns a file listing data

While EnumFileS method is processed, EnumFile event is raised for every file listed by FTP server.

```
ftp.Connect  
ftp.EnumFile ""
```

```
Private Sub ftp_EnumFile(ByVal Filename As String, ByVal FileSize As Double, ByVal User  
As String, ByVal Group As String, ByVal FileDate As Date, ByVal FileFlags As String)
```

```
AddFileToList Filename, FileSize, FileData
```

```
End Sub
```

Reply

Sub Reply (text As String)

Returns FTP server reply text

Useful for debugging purposes.

StateChange

Sub StateChange (State As FFTP_STATES)

Indicates the state change of the FTP connection

States are:

FFTP_STATE_NOTCONNECTED,
FFTP_STATE_CONNECTED,
FFTP_STATE_CONNECTING,
FFTP_STATE_AUTHORIZING,
FFTP_STATE_LISTING,
FFTP_STATE_DOWNLOADING,
FFTP_STATE_UPLOADING,
FFTP_STATE_PROCESSING,
FFTP_STATE_LOGGEDIN .

TransferComplete

Sub TransferComplete (LocalFilename As String, RemoteFilename As String, BytesTransferred As Long)

Indicates that transfer is completed

You can check BytesTransferred parameter to see if all bytes of a file are transferred.

TransferProgress

Sub TransferProgress (Bytes As Long)

Reports transfer progress

Bytes parameter is a total number of bytes transferred for a file.

TransferStarting

Sub TransferStarting (LocalFilename As String, RemoteFilename As String, Offset As Long)

Indicates that transfer is about to start
