

Bring Greater Creativity to Your Apps — With ActiveThreed™ Plus

ActiveThreed Plus is a set of eleven 32-bit ActiveX™ controls that give your apps the look and feel of today's most popular interfaces: Office '97®, Microsoft® PowerPoint®, the Internet and more. Your apps spring alive with powerful new controls that give you the freedom and flexibility to be as creative as you wish. ActiveThreed Plus is like having all the functionality of seven interface-enhancing products rolled into one lively tool. Resize and reshape your forms and controls virtually any way you wish. Our new and enhanced set of monster controls helps you stretch your imagination.

New Controls!

With SSResizer, you can dynamically resize and reposition your picture boxes and controls, including fonts, without writing a single line of code. As the size and shape of the forms change, the controls are automatically resized and repositioned to maintain their original layout. SSScroll lets you optimize your use of limited screen space by placing your controls into a large virtual area that can be scrolled in to and out of view. Scrolling can be done at both design-time and run-time, so that users can access more of your application than would otherwise fit on the screen. Astound your users with our exclusive PictureRegion™ technology, incorporated in SSSplash. It lets your forms and components adopt virtually any shape you can imagine. Rounding out our new controls is SSTransition, which helps you attract attention to certain areas, highlight information, and emphasize dramatic changes. With thirty-seven presentation-style transitions, you can control the effect and speed of the transition for maximum graphic impact.

New Enhancements!

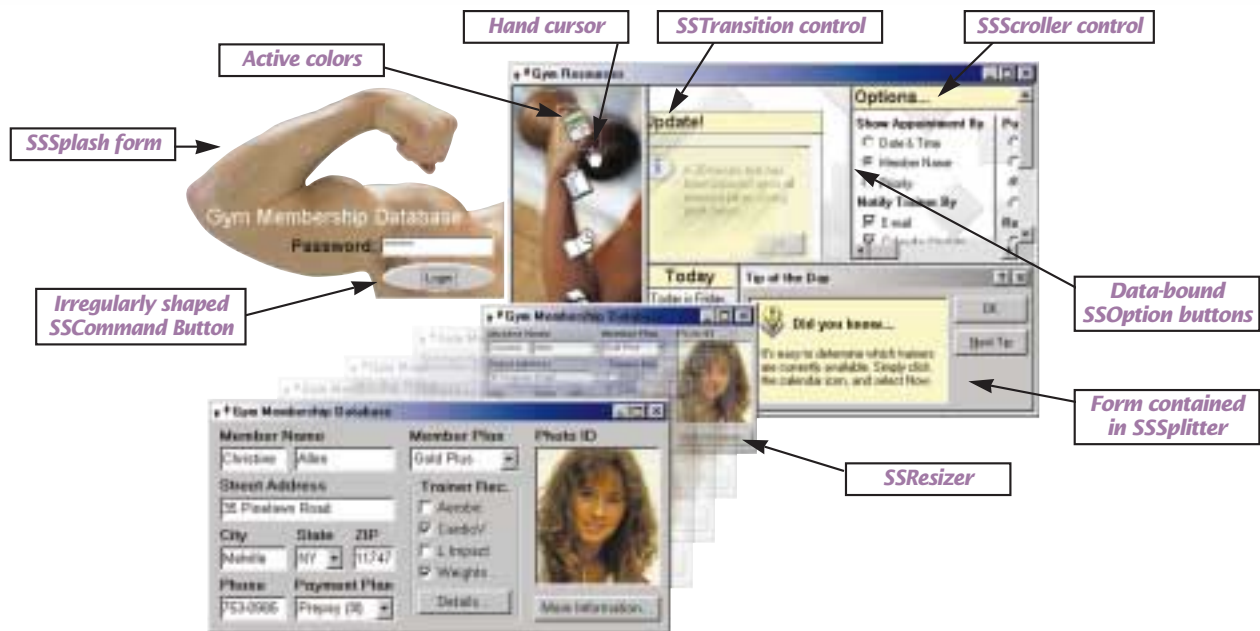

We've also added greater dynamic functionality to our existing controls. For example, now you can place forms in Splitter Panes as easily as setting a property at run-time. Enjoy the flexibility of creating custom button shapes in any way you choose. Generate "disabled" graphics automatically for controls that support disabled states. Save and restore Splitter layouts just the way you want them. Enjoy a finer degree of animation control, even varying the speed of the animation as it is running. Bind SSOption Buttons to a data source to simplify data entry for your users. Incorporate "Active" colors that respond to mouse movements; your controls will light up when the cursor passes over them, a common sight for anyone who browses the web. Plus, you can add a familiar web-like "hand" cursor to your apps.

Original Favorites!

Don't forget the original ActiveX controls that made ActiveThreed, a member of the ActiveSuite family of products, such a hit. Like the SSPanel container control, which displays multiline captions and pictures against a 3D background. SSOption emulates the standard Windows option button control for turning options on and off. SSRibbon introduces multi-state push buttons that can be grouped together like a toolbar. SSSplitter displays multiple panes that can be adjusted in size. SSCheck emulates the Windows check box control; SSFrame emulates the standard frame control; and SSCommand emulates the standard command button — all of which give your applications a "look and feel" users are familiar with.

You can do all this and more, with ActiveThreed Plus. So, go ahead and be creative. With the power of ActiveThreed Plus.

ActiveThreadTM Plus

Give your applications a lot more punch with the components in ActiveThread Plus.

ActiveThread Plus is a red-hot set of eleven 32-bit ActiveXTM controls that give your apps a "powerlift" with the look and feel of today's hottest environments: Office '97[®], Microsoft[®] PowerPoint[®], the Internet and more.

Generate "disabled" graphics automatically. Enjoy a finer degree of animation control. Use "Active" colors that respond to mouse movement. Incorporate a web-like "hand cursor" in your apps and much, much more...

Empower your development potential even further with Sheridan's entire ActiveSuiteTM package.

New Controls!

SSResizer

Dynamically resize and reposition your controls, including fonts, without writing a single line of code.

SSScroll

Optimize your use of limited screen space by placing your controls onto a large virtual area that can be scrolled in to and out of view. Scroll at design and run time.

SSSplash

Blow your users away with our exclusive PictureRegion[™] technology, and let your forms and components adopt virtually any shape you can imagine.

SSTransition

Attract attention, highlight information, emphasize dramatic changes—with 37 PowerPoint-style transitions.

New Enhancements!

SSSplitter

Now allows containership of forms. Speed development time by placing your forms in a Splitter pane as easily as setting a property at run time!

SSOption

This newly improved tool now supports Data Binding, allowing you to enhance how applications display all types of data, as well as simplifying data entry.

SSRibbon and SSCommand

Turn any image into a button with Sheridan PictureRegion technology! Newly added option allows you to support non-rectangular buttons.

All of ActiveThread's great original controls have been enhanced, offering developers more of the features they want and need, including **SSCheckbox**, **SSFrame**, & **SSPanel**.
