

SQL Server Administration Pack

ON-DEMAND TRAINING

Course Overview

Our SQL Server Administration Pack includes 6 courses specifically for DBAs or those looking to become a DBA. These classes will give you a jumpstart on your DBA journey or keep you up-to-date with your skills.

The SQL Server Administration Pack Includes:

SQL Server High Availability

By the end of the course, students will have a firm idea of what high availability tools are presented within SQL Server, as well as how to deploy those tools.

SQL Server Performance Tuning

The SQL Server Performance Tuning course is designed to provide SQL DBAs with the tools and knowledge that is required to keep their SQL Servers running efficiently and reliably.

Introduction to T-SQL

This course teaches how to write queries that involve multiple tables and summary queries, as well as modify data and understand the logical programming aspects of T-SQL.

Advanced T-SQL

Advanced T-SQL is an intensive course designed specifically for SQL developers. This course will demonstrate the different methods to solve a particular real-world scenario and then explain why one may be better than another due to performance reasons.

DBA Fundamentals

This course gives a step-by-step overview of SQL Server and will review installing SQL Server and its various services, post configuration, setting up maintenance plans, reviewing essential concepts surrounding what backups should be selected, and basic SQL Server and Active Directory Security.

SQL Server Hardware and Configuration

In this class you will learn how hardware and software operate together, so you can better understand what your systems can actually achieve and how to configure them properly for SQL Server.
