

# PrimalsQL™ 2020

**PrimalsQL 2020** Making database query development and testing a snap, regardless of your database type or vendor.

- ❖ Supports **multiple database providers** from a single tool.
- ❖ Access, SQL Server, SQL Server Compact, MySQL, Oracle, ODBC, OLEDB, PostgreSQL and more.
- ❖ Build complex queries with the **Visual Query Builder**.
- ❖ Use the **Database Browser** to explore the different connections.
- ❖ **Generate query scripts** for Windows PowerShell and VBScript.
- ❖ Generate **Windows PowerShell GUI scripts** from custom queries.
- ❖ Format query strings for PowerShell, VBScript, C++ and HTML.
- ❖ **Export query results** to HTML, XML, CSV or Text.
- ❖ Edit Stored Procedures and Views.

# PrimalSQL™ 2020

SAPIEN

## Database Vendor Independence

PrimalSQL is not constrained by a specific database vendor. You can connect to Microsoft SQL Server just as easily as you connect to Oracle, MySQL or even Microsoft Access. This gives you independence AND flexibility working with whatever databases you need access to.

## Mix connections

PrimalSQL lets you connect to any number of databases, mixing vendors and connection types, simultaneously! Enjoy the flexibility of being able to create multiple connections to different databases at the same time.

## Live Query and Edit

You have created a new database and now it's time to test it. Or maybe you just need to develop some new queries for the accounting department. With PrimalSQL's live query and data editing support, ad-hoc queries and testing is even easier than ever.

## Export Results

Now that you have gotten the results that you need, you need to present them to whomever requested those

results. PrimalSQL enables you to easily export the query results to HTML, XML, CSV or Text for further processing or presentation.

## Visual Query Builder

Not a DBA? Can never remember those long table and field names that your database team insists are "self-documenting"? Forgot how to structure that one query you use every two months? Not to worry - with PrimalSQL you can create complex queries without expert SQL knowledge using PrimalSQL's Query Builder interface.

## Edit Queries as text

That very same query that you create with PrimalSQL's Visual Query Builder can be edited as SQL text in the SQL Edit Pane. Jump back and forth between visual editing and text editing for even more power and flexibility.

## Edit Stored Procedures

PrimalSQL also enables you to edit and create views and stored procedures in an easy to learn environment. Simply select the stored procedure you want to edit, make your changes and save it back to the database. Use the built-in SQL PrimalSense to make writing and editing your procedures even easier.

## Quick Script Generation

Need to use a database query in a PowerShell or VBScript script? With the click of a button, PrimalSQL enables you to export your query as PowerShell or VBScript, either to the clipboard for pasting into PrimalScript (or any other editor) or to a file for later use.
